

Azure TrafficManager by KoçSistem

At A Glance

Many businesses want to take advantage of the power of Microsoft Azure without the difficulty and expense of managing it on their own. Some businesses do not have the technical expertise or capacity to run their cloud infrastructure, tools, and applications. Others may have the ability, but choose to maintain focus on their core business. Many large businesses are on a multi-stage cloud journey that requires migration and management services to adapt to changing needs.

KoçSistem provides customized cloud service offerings to meet specific needs. These offerings provide the flexibility to change or grow your cloud services as your Azure needs change and to increase value by delivering essential services and support.

Azure Virtual Network Endpoints

What is Azure Virtual Network Endpoints?

Azure Traffic Manager is a DNS-based traffic load balancer that enables you to distribute traffic optimally to services across global Azure regions, while providing high availability and responsiveness.

Traffic Manager uses DNS to direct client requests to the most appropriate service endpoint based on a traffic-routing method and the health of the endpoints. An endpoint is any Internet-facing service hosted inside or outside of Azure.

Benefits

Obtain high availability with multiple automatic failover options

Seamlessly combine on-premises systems and cloud systems

Increase app responsiveness by leveraging performance routing

Get actionable insights based on user traffic volumes and patterns

What are the benefits of KoçSistem Services?

- Fast and efficient processes in operational works
- Uninterrupted service
- Reducing the workload of IT teams
- Fast and efficient technology adaptation
- Avoid unforeseen interruptions
- Business Continuity

Why KoçSistem?

- Expert technical team
- End-to-end service provider
- 18 years of managed services experience
