

# Azure Backup Services by KocSistem

With Azure Backup Services, you can protect your data easily against ransomware and user errors. Cost-effective Azure Backup simplifies data recovery processes and deployment processes are easier compared to other backup services.

## Features

- One-click backup support for SQL databases and virtual machines running on Azure
- Instant backup for single files, folders and entire VMs
- Amount of unlimited and free incoming or outgoing data
- Full, differential and incremental backup types in line with system needs
- Continuous monitoring of backup status with dynamic reports

## What is Azure Backup Management Service?

### Management Service Scope

- Creating planning, business continuity and disaster recovery scenarios
- Backup operation management depending on the backup requirements of the servers and customer request
- Installing and configuring backup agents so that Azure Backup can run efficiently
- Log tracking for problems that may occur in the backup system
- Adding, removing and size update operations for vaults
- Creating backup reports
