

# Azure Virtual Network Endpoints by KoçSistem

## At A Glance

Many businesses want to take advantage of the power of Microsoft Azure without the difficulty and expense of managing it on their own. Some businesses do not have the technical expertise or capacity to run their cloud infrastructure, tools, and applications. Others may have the ability, but choose to maintain focus on their core business. Many large businesses are on a multi-stage cloud journey that requires migration and management services to adapt to changing needs.

KoçSistem provides customized cloud service offerings to meet specific needs. These offerings provide the flexibility to change or grow your cloud services as your Azure needs change and to increase value by delivering essential services and support.

## Azure Virtual Network Endpoints

## What is Azure Virtual Network Endpoints?

Virtual Network (VNet) service endpoints extend your virtual network private address space. The endpoints also extend the identity of your VNet to the Azure services over a direct connection. Endpoints allow you to secure your critical Azure service resources to only your virtual networks. Traffic from your VNet to the Azure service always remains on the Microsoft Azure backbone network.

## Benefits

Improved security for your Azure service resources

Simple to set up with less management overhead

Optimal routing for Azure service traffic from your virtual network

## What are the benefits of KoçSistem Services?

- Fast and efficient processes in operational works
- Uninterrupted service
- Reducing the workload of IT teams
- Fast and efficient technology adaptation
- Avoid unforeseen interruptions
- Business Continuity

## Why KoçSistem?

- Expert technical team
- End-to-end service provider
- 18 years of managed services experience
